Installation Guide

Part No: **CTSFA019.2** Fiat Can-Bus Steering Wheel Control Interface

Please note that the DIP switch positions are very important (please see information below)

On is "UP" position
Down is "OFF" position

DIP switch 1 - Set to "ON" for vehicles fitted with "250VP1" factory Radio, otherwise this should be set to "OFF"
DIP switch 2 - Set to "ON" for vehicles fitted with "250VP2, factory Radio, otherwise this should be set to "OFF"
DIP switch 3 - Set to "ON" for vehicles fitted with factory "Blue & Me" system, otherwise this should be set to "OFF"
DIP switch 4 - Default set to "ON" from production for Pioneer, set to "OFF" for Sony (other Radio brands can leave Dip3 either on or off)

Only perform changes to circuit mounted DIP switches with the interface disconnected from the vehicle

Incorrect DIP switch setting will affect performance and may result in dashboard clocks flashing
